

# Digitalization in gene therapy.

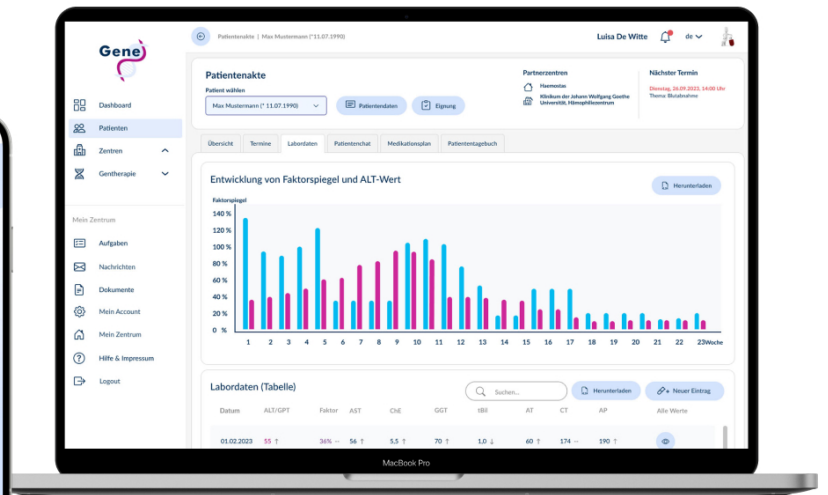

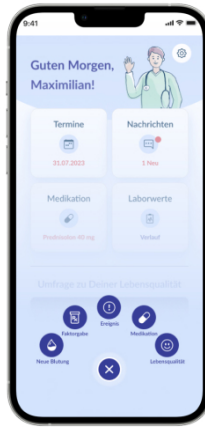

- COLLABORATION AFTER HUB & SPOKE
- GENE THERAPY STEP BY STEP
- ELECTRONIC PATIENT FILE
- HOLISTIC OVERVIEW
- INDIVIDUALIZED FOR EACH PATIENT

## Everything about gene therapy in one place

Gene therapy is not limited to the actual infusion, but also includes the time before, during and after the therapy. Hub and spoke centers must jointly support and accompany the individual patient throughout the entire gene therapy cycle. The Gene software platform offers a holistic, secure and comprehensive solution for the entire treatment process. Cross-center **communication** and the exchange of data, documents, messages and information are protected and encrypted in Gene. **Tasks** can be assigned to specific centers and patients. **Notes** and relevant information material are comprehensively available. **Interfaces** are used to connect peripheral systems such as diaries, information and pharmacy systems, registers and studies.

## App for patients

New and innovative patient app as a personal companion for optimized gene therapy.

Patient app and center platform interfaces

*The patient in focus – Together through all the steps of gene therapy.*

### Coordinated action

Create and prioritize your own tasks, assign them to your colleagues or your partner center.

### Document management

All manufacturer documents centralized, plus the option to upload therapy-relevant documents about the patient and share them with the partner center.

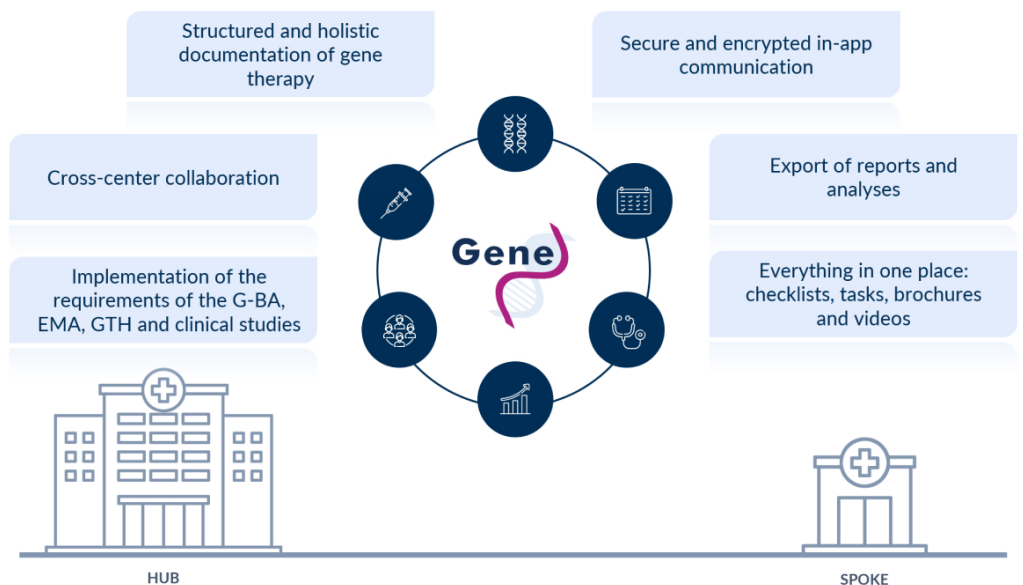

### Secure messages

Use the messaging function within Gene for secure communication and the exchange of documents with other centers.

### Everything at a glance

Everything available anytime and anywhere: a summary in the dashboard, consolidation in the patient file and a shared gene therapy process.
